

The Materials Metrology™ Company

Press Release

ReVera Expands European Coverage with TELTEC

TELTEC providing all local sales, service and support for ReVera products in Europe

Sunnyvale, Calif., March 5, 2008 – ReVera Incorporated, the materials metrology company, today announced that has signed a definitive agreement with TELTEC to be its exclusive representative for all sales, service and support for ReVera products in Europe. TELTEC, a leading semiconductor equipment and materials distributor and representative, had previously provided service for ReVera products in the region.

“ReVera’s materials metrology products are increasingly recognized as key enablers in the manufacture of next generation devices,” commented ReVera CEO Dave Ring. “As our installed base continues to expand, it is important that we also enhance our support infrastructure. To address this need, ReVera has broadened our relationship with TELTEC to include all sales, service and support in Europe. As a service provider for ReVera products for the past four years, TELTEC has already demonstrated their ability to provide high caliber, local service for our customers, and we are confident in their ability to provide comprehensive sales coverage as well.”

Effective immediately, ReVera customers in Europe can contact TELTEC directly regarding all sales, service and support issues. Contact information for TELTEC representatives can be found on the ReVera website at www.ReVera.com.

About TELTEC

TELTEC is Europe's leading Semiconductor Equipment and Materials Distributor and Representative. Since TELTEC's foundation in 1983, the company has been a most stable and reliable partner to its customers, offering a superior product portfolio and support infrastructure. TELTEC offers its complete suite of Sales, Consulting, Service and Applications capabilities to manufacturers seeking one single organization as their extension in Europe. Visit www.teltec.com for more information.

About ReVera

ReVera Incorporated is a leading provider of materials metrology solutions for advanced semiconductor processing. Its products allow device manufacturers to measure, monitor and control critical materials properties, enabling them to rapidly integrate and manage the new materials required for 65 nm, 45 nm and beyond. ReVera systems are proven in production in a broad range of applications, and are backed by a global network of applications, field service, sales and logistics personnel. ReVera was established in 2004 as a management-led spin-out from Physical Electronics and its wholly owned subsidiary, Charles Evans and Associates.
